

## **AGUAS DEL VALLE DEL GUADIARO INFORMS:**

1<sup>st</sup> June 2024

The Junta de Andalucía modifies the measures related to drought, which will be applied between 1<sup>st</sup> June 2024 and 30<sup>th</sup> September 2024 and which, in Campo de Gibraltar, are summarized as follows:

In urban use, an increase in the maximum endowment is proposed up to 225 liters per inhabitant per day considering the total resources. With this provision, the domestic needs of any household should be covered.

With respect to swimming pools, the use of public pools was already authorized; now the use of private pools will be allowed if they comply with the established allocation, have a water recirculation system so the water is used in the indispensable quantities to replace evaporation losses, clean filters, and guarantee the sanitary quality of the water.

For irrigation of green areas, 200 m<sup>3</sup> per hectare per month is authorized, with the possibility of increasing this to 400 m<sup>3</sup> per hectare per month for survival irrigation when there are species of special botanical interest, which means one irrigation per week.

Aguas del Valle del Guadiaro works very hard so that there are no supply problems, but we have limited water resources by the Administration, and when the demand increases due to irrigation, unfortunately there is a lack of water, as in fact has happened.

We call again for responsibility and compliance with the measures.
